

Project Name: Whitney Reservoir Restoration

Project Summary: Recent spruce mortality from spruce bark beetle has appeared along the eastern slope adjacent to Whitney Reservoir. This area is less than 250 acres in size and would fit in the current CE 36 CFR 220.6(e)(14)... which allows for “Commercial and non-commercial sanitation harvest of trees to control insects or disease not to exceed 250 acres, requiring no more than ½ mile of temporary road construction, including removal of infested/infected trees and adjacent live uninfested/uninfected trees as determined necessary to control the spread of insects or disease....” The area has been ground trothed and can be flagged in on the ground. Goal would be to complete CE so that the area could be prepped for sale in the Summer of 2016, with an offer for sale in the 1st quarter of FY2017.
